

IMPLICATIONS OF CORONAVIRUS: COVID-19's Impact on Survivors of Domestic Violence

S.A.Y.A. Inc

HIV: United States (Source: CDC)

Nearly 250,000 women are living with HIV/AIDS in the United States (2018)

One in five of all new HIV diagnosis are women

Black women represent 13% of people living with HIV/AIDS, compared to 3.8% for white women

Black women represent 11% of new HIV diagnosis, compared to 4.1% for white women

INTERSECTION BETWEEN INTIMATE PARTNER VIOLENCE & HIV:

United States (Source: CDC; National Intimate Partner and Sexual Violence Survey)

"Several studies have examined the relationship between violence and the timing of becoming infected with HIV or disclosing HIV status. These studies suggest that IPV can be both a risk factor for HIV, and a consequence of HIV."

(CDC, 2010 - conclusion of meta-analysis of over 30 studies)

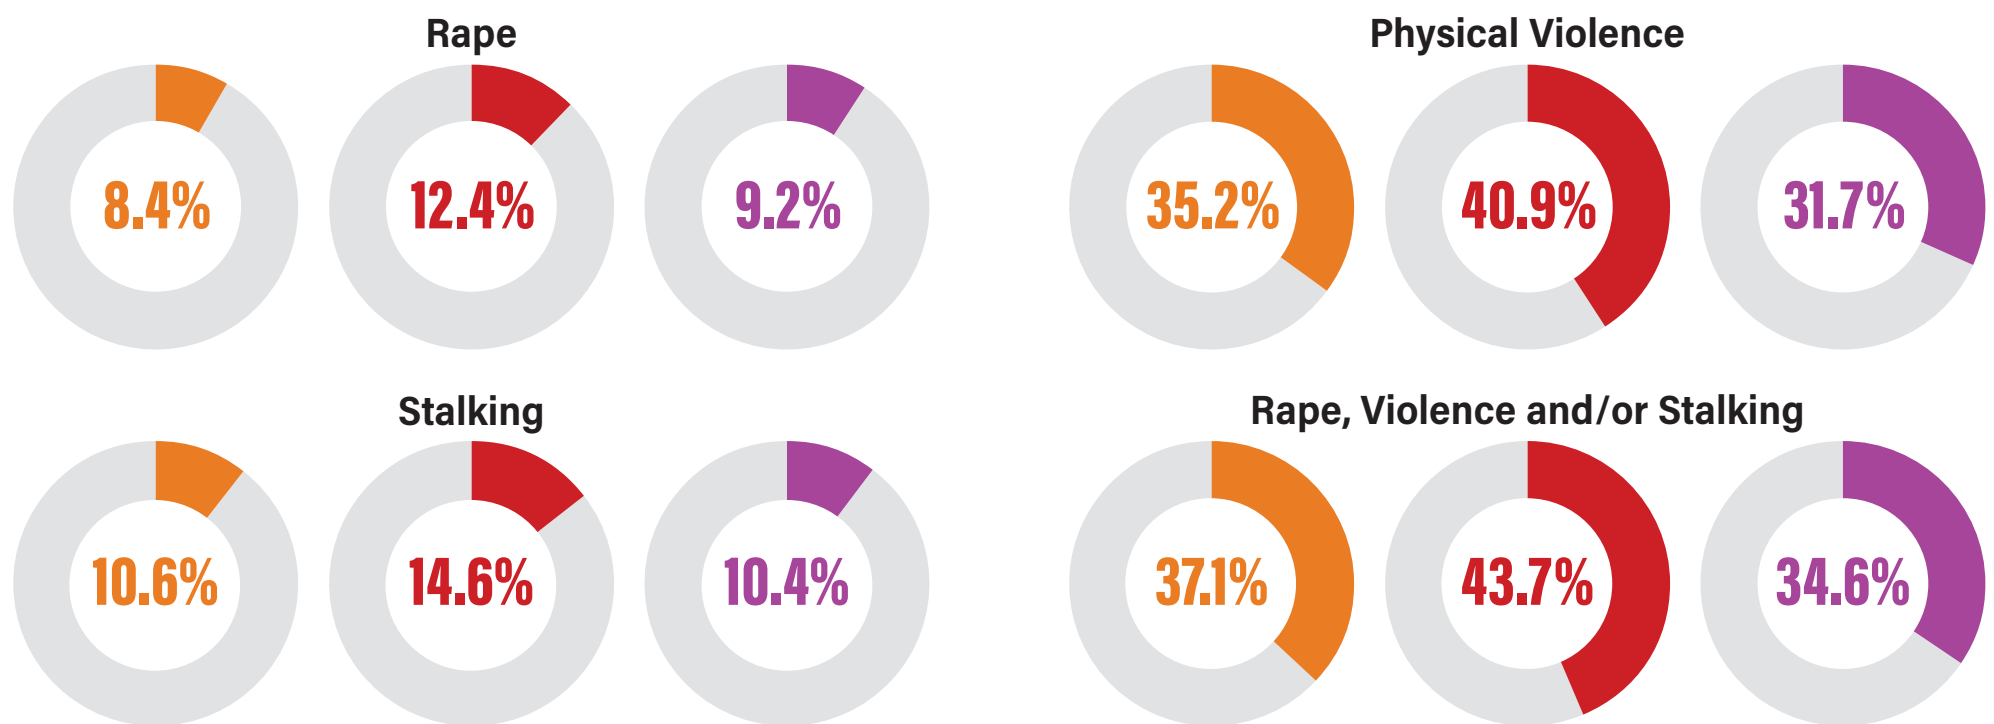

Key Points:

Women **4x more likely** to experience antiretroviral adherence "failure" after recent domestic violence

One in five women reported domestic violence after seroconversion disclosure

Prevalence of Experiences (by race, women):

COVID-19 SNAPSHOT:
